Activity 04 - Create a Process Infographic with Microsoft 365 Copilot

- Course: Generative AI for Powerpoint (C012)
- Topic 2: Creating PowerPoint Infographics with AI
- Duration: 35 minutes
- Tools: Microsoft 365 Copilot app + PowerPoint
- Output: Five-stage process infographic and reusable PowerPoint component library

Objective

Use microsoft 365 copilot to generate a five-stage process infographic, then rebuild decision-critical labels, shapes, connectors and smartart as editable powerpoint objects.

Scenario

Northstar needs an editable five-stage sustainable-delivery process infographic for store managers. Use the supplied structured Microsoft 365 Copilot prompt and approved synthetic stage data. Treat the Copilot output as a design direction. Build all stage names, values, connectors, source labels and decision meaning as editable PowerPoint objects.

Detailed instructions

1. Review the source and prompt. Open the A04 workbook and PROMPTS.md. Confirm the five approved stages, audience, decision, source note and forbidden claims before using Copilot.

2. Generate the process direction. In Microsoft 365 Copilot choose Create > Design an infographic. Submit the structured process prompt, add only the approved source content, choose Wide and apply the approved brand colours.

3. Inspect before use. Reject any result with the wrong sequence, invented facts, embedded unreadable text, ambiguous symbols or inconsistent visual grammar. Record the accepted and rejected options.

4. Preserve the original. Copy or download the selected Copilot output as evidence. Work on a named PowerPoint copy so the generated direction remains available for comparison.

5. Open the PowerPoint start file. Save a named working copy, set guides and margins, and insert only the approved assets.

6. Build editable information. Create the five stage containers, titles, metrics, connectors, source notes and decision labels as native PowerPoint objects. Do not bake claims into the image.

7. Align and distribute. Use Shape Format > Align and Distribute. Group each stage logically while keeping text and data editable.

8. Add accessibility. Write purpose-focused alt text for meaningful assets, mark decorative assets where appropriate and preserve direct text labels.

9. Complete provenance. Record Microsoft 365 Copilot, exact prompt, date, source status, intended use, rejected output, human changes, reviewer and owner in the workbook.

Suggested timing

- 5 minutes - Set grid and build first component

- 15 minutes - Duplicate, align and connect
- 8 minutes - Insert and format icons
- 5 minutes - Compare SmartArt
- 2 minutes - Save and submit

Included inputs and assets

- Synthetic CSV and formula-enabled XLSX mock data
- Editable PowerPoint start and worked-example files
- PROMPTS.md with an activity-specific structured Microsoft 365 Copilot prompt plus analysis, refinement and review prompts
- AI Prompt Lab worksheet for provenance and human-change records
- assets/ with a generated sustainability asset sheet, four transparent PNGs and ASSET-MANIFEST.txt

Submission

Submit the editable PPTX, completed XLSX, source CSV, prompt/source log, used assets and checklist. Record every AI tool, prompt, source, rejected claim and material human change.

Debrief

The process uses a consistent component system, real connectors, direct labels, purposeful whitespace and editable PowerPoint objects.
